Fruit Ridge Notes - All Fruit & Veg & More - Thursday - June 8 - 2017

Warm Greetings to All Ya's and It's Gonna Get Warm they Say

*****For Any-All** of you Cherry and Blues and Grapes Guys & Gals.... and Some of You Vegie and Apple Guys as well...

Remember to gear up in a timely manner for your "Bird-Fight" The only practical tried & true way I have ever seen work consistently is the "**Avian-Bird-Control**"There are piles of great Testimonials about it by huge Growers that claim it always works. They say if it doesn't perform for you, you did something wrong with the Appln.....

We were the first ones around to take a serious look at this Avian, and so many of our Growers were so impressed we have been vigorously sharing the good news ever since.

And, It's so easy to doIt is just a Foliar Appln that can be Tank-Mixed with other stuff you are already doing..... And, It's really cost effective compared to all other methodology out there [which doesn't work worth a hoot]I have huge Growers purchasing in **Totes** that are continually very impressed....and they are doing Applns for less than **\$19** per Acre. I have Guys using in SunFlowersand in Live-Stock-Feed-Warehousing where they **Store and Blend** Live-Stock Feedand in Feed-Lots where Birds are crappn in the FeedBunkers.....and of course in all Fruit & Vegie Crops.

It's important to get your SpraySolution to **pH of 7=Neutral** ...or a little bit higher is perfectly OK..... You should Tank-Mix only with products that Do-Not have a very-Low-pH comin-out-of-the-Jug... like for example... my Blues Guys and Cherry Guys want to be spraying CS2005 at the same time.....**Not** recommended. CS2005 has a very very low pH comin out of the Jug.

I really interrogated them really intensely about this.... The Manuf'r wants a Neutral-7-pHand does not want a product with a really low-pH-out-of-the Jug to be in the Tank-Mix with **Avian**, *eventho you adjust your Tank-Mix pH up to '7' !!!*

When lookn back 2-3 years, the Manuf'r did not know why on 1 or 2 occasions we had a Cherry Guy that could not get to a comfort level that Avian was really workn for him very well...??? After a bunch of research.... Its because the Tank-Mix pH was to low.

In Vineyards....a Huge Grape Grower has enjoyed 100% SuccessHe says in his adjacent smaller Vineyards where he didnt use **Avian**, the birds were like locusts.

Huge successes in Barnsfor Swallows... One guy claims 98% of the Birds left immediately....except for a few swallows with active Nests...but even those bailed out after 2-3 weeks....

This stuff works on all FlockingBirds, Robins, Crows, Pigeons, Geese, Swans, Coots and all small Birds....Works excellent in all Crops, Food-Processing Plants, Lawns and Recreational Grassy areas... Marinas, Condo Common Areas and around their Ponds, Pools and PatiosAnywhere....and it really smells nice....and made with all Food-Grade ingredients.

And now they have a new "**Avian-Fog-Force**"...a very easy-to-use-Time Release Aerosol-System.... for installing inside Barns & Stables & Garages...or hang it in a tree on the SouthWest side of your Patio....??? It just simply keeps birds away.....Zero BirdDooDoo on the Patio Table and Furniture.....very Qwik-Easy-Install.

And.... AvianControl is "**Made in Michigan**" ...which is huge to me.

We are proud to be Stocking Avian Products in 1 ga., 2.5ga., 15ga.Drums, 30ga.Drums, 55ga.Bbls., and 275ga.Totes.

On Your 1st Appln you want to use 30 - 40 oz-Ac....and then the 1 or 2 additional Applns that may or may not be necessary would be at 24 oz-Acre. Use whatever GWA you deem prudent for good coverage.

When some of you factor in your TRV, you may well be down to a 1-pint-acre-Rate....???

.....We also have the Aerosol Dispensers..... Very Cool.
