## Fruit Ridge Notes - Monday - March 5 - 2018

### Hey Faves .....

**At 1st Crack-Green ....** When you can look closely at the Fruit-Bud and see some Green-Tissue.... Before it's actually stickn out the end of the Bud....??? You can see it...

You are vulnerable to AppleScab..  
That is when we start with the "Dormant Sprays" ....Doing the Alternate-Center-Strategy ....Most Guys shoot for Mondays and Thursdays.....  
....Thereby getting **1 Complete-Cover** on per **Week**....

#### Using:

Lower GWA...like 15-20ga ....on up to 40 ga. for on Full-Production-Size Trees....

Slow-Down---Take Time to get thorough Coverage.

CS2005 @ 1 Qt.-Acre

FormulaII-SW @ 2 Qt.-Acre

Phoenix @ 1 Qt.-Acre

Do this Tank-Mix for 2 Covers.... 4 Centers.

Some Guys are planning to do **1 Qt-K.Phite** with **1 Qt FormulaII-SW** ...instead of 2 Qt. FormulaII-SW....??

I give this a ...for those reasons you heard at the Big Meetings a cupla-weeks back ...

We Stay Right On this Alt-Center-Strategy---No Let-Up....til End of Primary....which is early June normally. Why...??? Because there are *Always many Weather-Scenarios* that cause us sketchy-coverage...or 2 outta 3 years 5 days straight of Rains.... So ....We simply stay out ahead of all that crap. We stay Covered.

Have a Great Week..... r
