## Fruit Ridge Notes - Tuesday - April 17 – 2018

### Greetings ....

**Still Snowin here just an hour ago ....Crazy.**

**Look at that Extended-10-Day.... the Lows --\*F... are 24-31-25-28-30-35-39-43-38-43..... Which takes us out to April 25....Crazy.**

**\*\*\*Early-Pink** to Pink .... is the best **Timing** for your 1st Foliar 1-Pt-Ac. **VitaZyme**.... 15 Years of Research says no point in Jumpn-the-Gun.... And Yes.... Doing this included in a "Alt-Center-App-Program" is very fine.

Also... If you do a Weed-Spray directed into that Weed-Control-Strip....Consider doing 10-oz-per-Treated-Acre-V.Zyme with that. Very Low-**\$5**-Low-Cost....and huge-benefit Researcher-Verified-Results. Foliars---Target-Timings---Pink--PetalFall--2nd Cover--25 Da.PreHarvest--PostHarvest

**\*\*\*Q & A...Indeed...That is Very Strange** to me as well...The Provoke4F [Imidacloprid] that we [RGSs] promote is Labeled for virtually every Crop we are concerned with... Including Apricots, Peaches, Plums, Prunes, Nectarines, PlumCots, Tarts and Sweets.... The thing is....On Apricot--Nectarine--Peach.... It has a **Zero** [-0-]Days-P.H.I.....

On the Cots-Nectarines-Peaches, you're allowed 3 Apps of 3.2 oz.-Ac.Each.....which makes a Legal-Limit of 9.6 oz-Ac.Season. You can also do lower rates and more apps...but still only 9.6 oz-Season-Acre. But that **0**-Day.PHI really seems weird.

....and then on Cherries--Plums--Prunes it has a 7 Da.PHI....and a 16 oz-Seasonal-Ac.-Limit .... On Blues its 3 Da.PHI....Apples=7 Da.PHI ....

**The very main thing to remember**....This stuff is only **69 cents-oz**.... the 3.2oz-Ac-rate=**\$2.20** ...Please max this one out.... 5 [Apps@3.2oz=16oz.Limit=\\$11-per-Whole-Season](#)....

**.....Please ... Max this one Out.**

You remember that Imidacloprid is one of the original "Neonics" ..... and remember some of the more recent "Neonics" to hit the Market are \$40-ac.or more....per one [1] Appln.

**\*\*\*Q & A..... Affirmative**...A Pal asked about potential mess with our CalCarbonate-*Phoenix* Tank-Mixing with our *FavePhites*....in our *Qt.Qt.Qt*.Tank-Mix. If you are not using the FormulaII-SW or the K-Phite, you really shouldn't do it. Lets keep in mind...\*\*Our Phites are "Neutral"pH... \*\*Ours are very Ultra-Pure-Virgin-Grade-Phites.... \*\*Ours are made with all Food-Grade-Stuff .... \*\*And our "005" does have a very low pH when coming right out of the Jug..... \*\*and our Phoenix does have Hi-pH .... So when connecting all the dots... Unless you're only using 10GWA...??? I seriously do not expect anybody to have any issues. If you are nervous about it, consider adding 1 pint-100gal-Indicate 5 to the Tank first.... This acts as a Peace-Maker. Then add the InSpray-90. Have your Tank nearly full of water before you add the Phites...then add the Phoenix ....and lastly the "005".

**And** ..... I have asked some of my nieces to ask their buddy Al Gore if there is anything he can do about this terribly brutal Global Warming.... ;-)

**Happy Happy Happy .....r**
