Fruit Ridge Notes  
from Ron Reister  
C.C.A.

## Fruit Ridge Notes - Wednesday - April 18 - 2018

**Hey Ya'll .... I'm Hearing a Bunch of Folks Voicing Disgust about our Weather Trends....**

....While I myself am still quite Content....??? Call me whacko.

**\*\*\*Q & A ... The Question was... "Whats Up with Regalia?? You're not talking about Regalia very much."**

**Yes** I do indeed still really like **Regalia**.... I have eye-witnessed in our own Trials and a bunch of other Trials from some very Renowned Researchers, where Regalia really works for all types of Disease Control.... Both Bacterial and Fungal. Really Good Stuff.

MSU likes it.... Alicandro likes it. Big piles of serious Research. Good Stuff.

I recommend using it when we have a decent Target.... like **not** so much at **1st-Crack-Green**...or 1/4" Green. I want some Foliage to absorb it.

It doesn't look like the price went up...Looks like still less than \$15-Qt.... ??

I like the 1 Qt-Rate ....We have a lot of experience with 1 Qt.... You all remember the outstanding performance of the "**1-2-3**" ....It still works really really great....

The **1-2-3**....Thats **1 Pint "005" plus 2 Pint Regalia plus 3 Pint FormulaII-SW** .... the "**1-2-3**".... Really works.... And ... When you consider all the various components we are actually getting with that Combo, it's a very Cost-Effective Tank-Mix as well.

Take a sec to seriously examine the attributes of this "**1-2-3**".... It delivers to your Target.... 3 Fungicides +Phos +K +SeaWeed +3 Bactericides +Zn.... All for about 1/2 the cost of a full-rate-Pristine.... and what does Pristine deliver to that Target....???

**\*\*\*We do not use** CapToZeb within 2 weeks either side of any Oil appln.... Just be **Kind** to YourOwnSelf ....Never ever use any Oils of any kind .... ever... No Oils....Zero.

**And** .... So...You have some Captan **50W** still layin around...?? So ....In your CapToZeb Tank, just use 3 lb.50W instead of the 2 lbs of the 80WDG.

\*\*\*\***One Fave Grower** is strategizing his Attack-Plan...where he had some very scary Fire-Blight-Threats last year in some very Hi-Dollar-Young-Blocks.... Using 1 Ga.-per-100-Gal-Tank-Mix of OxiDate 2.0 ...Using his 30 GWA...That ciphers out about \$13.25-per-Ac.-Cost.... This OxiDate 2.0 kills the Inoculum on the Limbs...Its a Contact Kill....so Get good coverage ...Like you always do ....

....Timing....???? Sometime before any Bloom.....

\*\*\*\***Q & A -- Yup---Mancozebs**---the EBDCs are compatible with Oils ..... But I'm tellin Ya.... Using Oils can be very painful for a tall stack of reasons....

I very highly **UnRecommend** any Oil Usage.... **Ever**.

\*\*\*\***Captan = Zero [0] Days PHI.....** Mancozebs = 77 Days PHI ..... I see Jeff Alicandro warning us to not get to close to Captans with any 'Fontelis' ...Anything with any Oils...Captan gets messy...Phyto.

Jeff says Polyram is less effective vs Scab than it's Cuzzns.....like KoverAll--Fortuna--Manzate--Penncozeb--Dithane. But Polyram has more Zinc in it... I do like that part.

**Big Ridge-Spray-Meeting** Tomorrow at Patrick Goodfellows .... North side 12 Mile Rd just west of M-37...Use the Orchard Driveway 400 Ft. west of houses.... And plan to stay for Pizza and Beverages after Meeting adjourns.... Reisters is bringing the Brewskis and Cokes.... Heidi-AgroFresh is getting the Pizzas !!!

**Be Safe ....r**
