Fruit Ridge Notes - Saturday - May 19 - 2018

Greetings Hope Your Saturday Morning is Proceeding Nicely

Some Timely Reminders.....

*****Clarification...** Yes, The other day I mentioned SAver was like \$12-Ac...??? I was **wrong**. My mention yesterday is correct \$24.88-Gal makes it \$6.22 - Qt... I think 40 oz-Ac. is the best rate.... Thats \$7.78-per-Acre.... Wow...Huge Bargain.

*****Remember...Exilis 6BA-Thinner....**Thins much better & harder and much more Fruit comes off, when you get **Highs in the 80's*F ...**

*****Exilis 9.5SC** comes in a cool little 4 x Qt.Case.... And is 5 Times more stronger than Maxcel or our old ExilisPlus

*****When we get towards P.Fall....our 15-18-25 GWA** doesn't get as thorough coverage as we do at T.Cluster.... And remember that, for more thorough Coverage, Slowing Down is sometimes a bigger part of the solution than is more Water/GWA....

*****Adding InSpray-90 to Your Chem-Thinner-Tank** will usually increase Uptake and Thinning Response. I really think its the thing to do for several reasons...?? **But**If you have never used a Spreader-Penetrator-Adjuvant with your Thinning Efforts...??? I'd certainly skip it.... If what you're doing is working, don't try to fix it.

*****Alicandro Tells** us that sometimes when a "Predictive-Blossom-Blight-Infection-Model" is telling us not to Spray...?? We actually really need to be sprayin.....In those HiDollar Blocks with a F.Blight-History.
*****It'll be AwhileFor all Bloom** to get really finished in Apples and Pears.... Several Guys are already reminding me how they have been caught in years past by unprotected "Rag-Tag-Bloom"
*****Remember ...Most Experts** now believe that higher Rates-Acre will deliver higher-Thinning-Response when you're using Carbaryl or 6BA or NAA.... All 3 For a long long time we didnt really think there was much diff between a pint of Sevin or a Qt. of Sevin.....??? Now there's plenty of evidence showing the difference...

******Yes....all of the 'N.A.A.'Products** are still all keeping it easy for all of us.... 4 oz. in 100 gal.water = 10 ppm....

It goes way way back to the Ol' 500 gal.Tanks...When they first came with those 20 oz.Tubes of Fruitone N... 1 of those in a Tank was 10 ppm.....

So...Pomoxa and FruitoneN ...Our *Refine 3.5WSG*Fruitone L....
All are oz-to-oz-to-oz-the same strength ...

Our Refine comes in a 20 oz.Canister.... In 500 Ga. delivers 10 ppm... In a 400 ga.Tank delivers 12.5 ppm.... In a 300 Ga.Tank...?? You get 16.67 ppm ...Measure carefully.

******Geo Sundin says that....** *"...application of OxiDate 2.0 resulted in a complete clearing of the flower stigma niche of culturable bacteria and fungi within 4 hours, in each of the 3 years this experiment was conducted."*

I sent you all that Research Review yesterday Kinda cool

....
