FRUIT RIDGE NOTES - MONDAY - AUGUST 13 - 2018

Hello from Hot & Dry Fruit Ridge & 17 Mile Praying Fervently for some Precip

******Recently Visited with some Non-Believers** They are seeing some Russeting on some Golden's that they claim was not showing up at 2nd--3rd--Cover.... Consensus is that they had to spray in the Heat ????. and I guess that can happen to most anyone this year.

So then I checked again in the Trial-Blocks where there are Golden's... Yup...some Russet there as well.

...Note: My *Non-Believer* Pals are those that don't use our "005" much later than 1/2"Green....and don't use much-if-any Redox.

******I am guessing there is way to much WoolyAppleAphid in Wayne Cty--N.York....**

Jeff is mentioning *again* that the only real chance for slowing them down now is Diazinon--21 Da.PHI.....with WPS-Field-Posting required for 4 Days with the 4-Da.REI....andsome Fruit-Buyers don't like it ...like I know Gerber does not like it.

******By All Means.... When a 'Butt-Kickr'** product is so Safe and does so much, and it costs Ya **\$2-per-Acre....**By all means "Max-it-Out"..... 7-Da.PHI....12Hr.REI===Imidacloprid4F ...like Nuprid or Provoke or Alias 4F or Macho4 or Montana4F... Lots of Names for Imidacloprid..... Originally...??? ...called Provado. Do **5** applns of **3.2** oz.-ac on Apples..... 16 oz.-total-Season....

I know some Guys that do this with **\$1.65** worth of Warrior 1EC in the Tank-Mix. Pls look seriously at Pg.116-MSU-E-154....

Warrior Rated "E" on BMSB, LeafRollers, GreenFruitWorm, RedBanded, STLM, TarnishedPlantBug....and "G" on AppleMaggot, C.M., Obliques, PlmCurc, SJS, WALH

...and then look for 'Imidacloprid' under 'AdmirePro'... It's the same stuff....

Imidacloprid Rates "E"GreenAppleAphid, Rosies, STLM, WALH.... and "G" on A.Maggot, BMSB, PlmCurc, Tarnished, and Woolies.

The Admire Pro is a bit stronger-A.I.-Formulation than my Fave 4F Imidacloprid-Generics... But all of my 4F Faves are always proportionately way less-cost-per-Acre. Just gotta do the Math. You want the 4F..... not the A-Pro.

*****Yes--Like always...On those 'Hard-to-Color-Varieties'...**Get the Blush 2X on soon....1 Qt-Ac-now....1 Qt later.

The Retain if necessary can go on after the 1st Blush app.... and remember you can do a Retain with your 2nd Blush appln. Retain retards Color.

We all know that the "Nutritionals" used for Color-Improvement actually increases the Anthocyanin Synthesis... resulting from the healthier Tree... paving the way for better Red-Color....

...While Blush 2X works by improving the Deposition and Expression of the Anthocynins in the skin of the Fruit.... Therefore Blush strongly improves both the depth of the Red Color and portion of the Fruit Surface actually colored Red.

Talk soonr
