### FRUIT RIDGE NOTES - WEDNESDAY - AUGUST 22 - 2018

#### Greetings ....What a Perfect Weather Day Here ..... Beautiful ....

**\*\*\*\*Question on Baythroid XL ....** Yes, I read that the same way you do. We can apply 2.8 oz-per-Acre for Leaf Rollers and some other Pests... while some Pests only call for 2.4 oz-Ac. **So...**I'd be doin the 2.8 oz. and making sure my official Records say my Target is LeafRoller.

**But....**Here's the down-side... We're only allowed 2.8 oz.Ac.BaythroidXL per-Ac.-Season !!! That means 1 shot is all we get... That means if you've already used it early-on...You can't use it now.

This has a 7 Da.PHI... 12 Hr.REI ... and it is a Butt-Kickr on BMSB and some others--pg.97-E-154 .... And yes I did notice on Pg.116-E-154 it doesn't mention "E" on BMSB ... It doesn't say anything...??? It does say "**E**" or "**G**" on A.Maggot, Codling Moth, all LeafRollers, OFM, FruitWorm, P.C., SJScale, STLM, WALH, TarnishedPlantBug....

That 2.8 oz-Rate only == **\$3.70 !!**

I really intensely like this one....and that 2.8 oz-Ac-Season-on-Apples thing really aggravates me a lot...

But remember this is a **RUP** product... Gotta be careful and accurate in official recordings.

...and ....You get an "AttaBoy" for scrutinizing that Label so well. ■■■■

And one more thing .... did you notice that the **Grape** Guys can use 12.8 oz-per-Acre-Season Baythroid ??!?!? They can legally apply 3.2 oz-Ac. and do 4 Applns !! Thats over 4 and 1/2 times more than the Apple Guys can use !!! ■■■■

**\*\*\*\*Mite Control -- Post-Harvest--Tart Cherry ....** Guys have mentioned that their Targets are the TwoSpotted Spider Mite and the Plum Nursery Mite. You maybe noticed that the Abamectin Products are in the E-154 [pg.153] for '3rd-Cover' Timing on Tarts, but not mentioned thereafter.

## FRUIT RIDGE NOTES - WEDNESDAY - AUGUST 22 - 2018

I also noted that up-front Pg.53-E-154 it mentions all of the Crops Abamectins are Used on, but it doesn't say Cherries there....??? Not sure why.

Anyway...I'd use 20-oz. Abamectin 0.15EC per-Acre.... And per-100-GWA-Tank-Mix I'd use 2 Pint-Vintre plus 3 Pint InSpray-90. I very highly UN-Recommend any of the Oils that most Abamectin Labels are suggesting.... No Oils. None. Ever. Your 20 oz Abamectin 0.15EC costs **\$8.13**-Ac.

Some other Miticides choices mentioned in E-154-Pg.155--Post-Harvest... Cipherring the higher side of the Rates, because you guys tell me thats what it takes to kill the mites..... Per-Ac-Costs range like this .... **\$60 -- \$58 -- \$51 -- \$44**

...and don't forget your *1 Pt.VitaZyme and 12 oz.BoronXtra and 3 Pt.ZincRush9 and 24 oz.CS2005* in this Post-Harvest-App-Cherries.

**\*\*\*\*The Grape Growers** are getting 1 last 4 oz.-Ac. Teb-45 DF on for some Rots & Mildews [14 Da.PHI] along with 2-3 Pint-Ac-Formulall-SW or K-Phite along with 1 Pt.CS2005

...and the 24 oz. Imidan with 6.4 oz Bifenture2EC[Brigade] ...We can switch out the Brigade for 4 oz.MustangMaxx of 3.2 oz.BaythroidXL....They're all just so very In-Expensive-Cheap. Our Insect Targets are Japs ... Leafhoppers....Grape Berry Moth .... and early-SWDs....

And.....Because I can....And it helps so much..... I recommend 1.6 oz.-Ac.Imidacloprid [Provoke/Nuprid4F]....**for \$1.30-per-Acre**. I can only do this twice...2 Apps-per-Season....and I certainly would get it on for sure. "0-Da.PHI" ...12 Hr.REI .....This chemistry is the old Provado.

**For** the Best-Shot at **Increasing Brix**.... Any day now...This week or Early Next.... Tank-Mix with all the above if you wish ....

Per-Acre: 8 oz RX-780 and 2 Lb.DiKaP.

Then do a Follow-Up-App of 1 lb.Ac.-DiKaP 10 - 12 Days later.

**Hope You're All Doing Well**.....r
