Fruit Ridge Notes - Thursday - September 6 - 2018

Hey Everybody Hoping the Rains Missed Ya later Yesterday ...?? We got a couple more tenths.... 😞

Picking Buckets Yes, we do have maybe a dozen or so, of the popular LightWeight NeoPrene Buckets left.... and 6 or 8 of those Imported-from-New Zealand really really fancy pricey "Yield-Max" Brand Buckets also left

.....and those Strathmore "**Super-Duty**" Aluminum **Step-Ladders** Yes ...some 8Ft & 9Ft & 10Ft Ladders left yet.

*****Yeah....Alicandro and Other** Researchers do indeed say that adding a SeaWeed Product to your Blush 2X Appln usually makes a marked Performance Increase/Improvement resulting in better Red Color.....

....and Yeah ...We do have 2 really good SeaWeed-Product choices here "Kel-Pak" and "Establish" ...I really like them both. Both come in 2 x 2.5 g. Cases. Use **1 Qt.-Ac.** with 1 Qt.Ac. Blush 2X..... That addition is only like \$7 - \$10 - per-acre.

Alicandro mentioned seeing the most dramatic increases in Color on the Fuji & Braeburn & JonaGolds and Ida's.....when doing the SeaWeed trick.

*****A Bunch of Honeys** around here have a long-way-to-go for decent Color for that U.S.Fancy & Extra Fancy Color.....

ReminderBe very cautious with Retain.... as it really really slows down the Natural Coloring process in Honeys. Some Guys just simply refuse to use Retain on their Honeys ever again.

But...Some Guys make it work, as they always have at least 1 shot of Blush on before their Retain App.

*****And Then I have Some Guys** That are getting Xtreme Red-Coloring Results with a strictly Nutritional Approach This is only 2-3-4-Years in the "Watching".... so kinda new. The Concept of the Nutrition-Approach isn't new of course.... But these Products are a whole entirely new Twist

The Key-Ingredient is DiKap.... They're using 2 Lb-Ac.... with 1 Qt.Formula-II-SW...plenty of Water. And then they repeat that 2 weeks later. Then they do a 3rd Appln 7-10 Da.Later using 3 Lb. DiKaP. They are seriously appreciating this Valu especially on older-Strain-Gala....the 'low-color-strain'... which is also the hardest to get size on

These Guys are getting that needed Size, and good Color, and also over-all great Tree-Happiness thru-out the Heat-Stress when the Trees need the Xtra "K".... Looking at their results, it appears they really have this thing Dialed-In.

***Warmest Regards Wishing You All U.S.Extra Fancys
....r***
