Fruit Ridge Notes - Monday - October 8 - 2018

Just Plain Crap This Weather is just plain Crap. I dumped 1.31 Inch at Gooding

Matt dumped 1.1 Inch here---Fruit Ridge Ave & 17 Mile Rd

.....

Those "Dumps" from precip Over-the-Weekend....

And now this Hot-Humid Crap

We are feeling so bad for you Guys that had such beautiful Orchard Floors, that looked like Lawns.

******The "'WunderGround.com'" ForeCasters** are saying 50% chance more Rain Tues.PM....and a 90% chance Wedn.PM

******Read Your Label Carefully**Talking with some Guys that are wondering about a Lorsban4E [Chlorpyrifos4E] Application Post-Harvest.....

They are saying that they **"Can see the Rosey-Aphid Target right there !!!"** And they know they can kill 'em right now.

Here's the thingwe are only allowed 1 Appln of Chlorpyrifos on Apples per Season....no matter when it is....and alsoNo matter if you didn't use Full-Rate in the 1st app. So please dont consider doing this if you already did Chlorpyrifos early-season.

And...when you read that Label, you may decide not to ??? It is worded as such that maybe only allows for the "Trunk-Sprays"??

And I am seriously guessing that the Guys that did all the Right Nukes early on PreBloom... ????

....which included the 2 Qt.-Ac.Lorsban4E[Generic]....most likely do not have the Rosey Issue real bad...??? Proceed with Caution.

******Just a Few Dollars Worth** of some Serious Butt-Kickn-Nukes applied Early-Season can surely save a whole mess of Late Season Concerns.

And....Usually ...Late Season Control-Measures are 2X - 3X - 4x the Per-Acre-Costs of those Early-Nukes....

******Some Guys "'GittnRDunn'" right Now....** the Post-Harvest **"Motivate"**[Ethephon] Appln on Hard-to-Crop Honeys....Tank-Mixing with BornXtra and ZincRush9 and VitaZyme.....

No need for NAA now for the "Return-Bloom" effort. The experts have those Return-Bloom NAA 'Tickler' Apps only Mid-Summer.

******I see in Jeffs "agr.news"** this morning he must have some Guys with too much 'FlySpeck'due to all the Rains. 8 oz. Indar2F with 3 or 4 lbs.Captan80.....

He says Braeburn and Fuji and Pink Lady are the main Fresh-Varieties to watch.

******Jeff also Telling** his Disciples to be sure to get the VitaZyme into that "Post"-Tank....

******Also Very Important ...When You are Making Your "Last-Trip"** thru the Younger-Stuff.... Like the NonBearing Blocks....

Be sure to have the CS2**005** in that Tank. This especially for any F.Blight concerns, but for virtually all other Bacterial and Fungal Diseases as well. **005** is the only one of all the Copper choices that works systemically. I'm thinkn this is why Jeff Alicandro always lists **005** first when mentioning the Copper-Product-Choices. When you calculate your TRV in those young Blocks you're not even using \$6 worth-Acre....and you are for sure GittnRDunn....Systemically.

Have a Blessed Week..... r
