Fruit Ridge Notes - Thursday - April 2 2020

Hey Friends

Some Bat-Crap-Crazy Times ...

Several of You ... Lots of You Already have a pretty-well-stocked Chem-Shed ... We've been busy Delivering for a Month.

But*If* some of ...or any of ...the radical rumors we're hearing have any truth to them...?? ...You & Us need to take a quick peek at the Pre-Bloom-Insecticides-Strategy and also make sure you have plenty of Captan80 & CS2005 on the Shelf.....and EBDCs ...and Redox Nutrients... and Kudos....

Today--Tomorrow are supposed to be Sunny & 60*.... Sunday also gonna be nice. Chance of Rain Saturday ...and a significant chance Rain Tues-7th.... I gotta believe theres going to be substantial "Green" exposed by Saturday...??

****** Question on "'N'"** So... Think about the 'N' needs of the Trees early-on during Pollination & Fruit-Set Time-Frame.... like 3 lbs-N-per-Day-per-Tree according to U-C-Davis-Riverside Research ...

I'm a Fan of the "'GreenFeed-27'"... a Fast-Acting 'N-Source' = 7%... and then 20%-Slow-Release.... Sooo Very Efficient !!!!

And...Researcher-Experts tell me that a Foliar-Appln "N" is 7-Times more efficient than a Ground-Appln !!! They have also reminded us that the "GreenFeed-27" @ 1 Ga.-Acre is as much "N" as 135 Lb-Cal.Nitrate !!!! Very Low-Cost-Efficiency Add 2 Qt-Ac. @ OpenCluster and again PreBloom....and again @ P.F....

GreenFeed-27 is compatible with everything you are doing except maybe Sulfur...??? Altho some Guys do that early...??? The 'pH' of GreenFeed-27 is 9.2 right out of the Jug...or Tote... This is never an Issue with Normal-Average-Tank-Mixes...

And GreenFeed-27 is Sooo Easy compared to any other "N-App-Practice" !!!

Also ...Very Doable with Fertigation---Drip & Injection !! We have never ever seen or heard of any Phyto Issues... Love this stuff.

Use often ... 2 - 3 - 4 Qt-Acre..... Low-Cost-Cheap

****** Nope---Any Real-Deal-Researcher** will boldly tell you the EBDCs *Never* have been as strong against Apple Scab as Captan. But.... the "CapToZeb" is the Best of All Worlds for adhesiveness and "Redistribution" of residual-protectant....

**** **Wollerin in the Mud ...** Lets Hope these Orchard Floors hold up.... As soon as conditions allow, try to get some Weed-Controls into that Strip. You all know that helps Sooo Much with Tree Nutrition success.

Make sure you have your VitaZyme in that Tank-Mix....1 Pint-per-Treated-Acre. Keep in mind that "Per-*Treated*-Acre" ...so you're not even spending \$3-Acre...????!!!!??? Most of Ya's are only treating 35% - 40% of the Floor.... "Per-Treated-Acre" 👍🌱😊

**** **Yes I Keep my Ear to the Ground**Listening-Watching for any truly viable-worthwhile-cost-effective "Look-Alikes" to VitaZyme....??? No ...There are not any. None. Notta. There are those that make all the big Claims-to-Fame...and charge 10 times more money.... and then do Nuthin ...Cant ever see where you put. Money down a Rat-Hole....

**** **Be Sure to Carefully Scrutinize Your Strategy** for Soil-Microbial-Activity-Enhancement.... Look carefully at all the "**Agrinos**" Products I will say it again It is by Far the Best 'Program' for a very Low-Cost. I have watched those \$250 - \$450 - per- Acre-Programs **Do Nuthin** !!!!

....While every-time-consistently the **Seasonal** \$55-Acre-Agrinos-Strategy works Great !!!!

All the Best Hope You're Doin OK with All this Weirdness....
